Project Title: Agricultural Project - Green Bliss

Team Members: Deepa T J, Jinto T J, Jithin T J, Snehamol, Aneena K Sinu, Albin K S, Alan K S, Shameera A.

Abstract: Agriculture is the greatest blessing to mankind. Without it, our lives would be difficult. A great percentage of the Indian society is dependent on agriculture. It contributes to about 18% of the country's GDP. Because of our long agricultural history, India is often identified as an agrarian nation.

With the advent of industrialization and globalization, our society has been through significant changes. With this came the decline of agriculture and farming practices in our country. With changes in the climatic conditions, disbelieving attitude of Indian youth towards farming and the old techniques used, has all contributed to this disdain. This is why we, as a group of youngsters, are bringing forward a small and compassionate model that will inspire and bring people back to effective and efficient farming methods and practices.

Our inclusive model aims to produce non-toxic vegetables in the most harmless and sustainable ways. Avoiding the dependence on the chemical pesticides and fertilizers, we intend on using the animal droppings and vermi-compost for our farm as the manures. Overcoming the problems of finding the sufficient land, fertile soil, farm equipment's and machineries, to the irrigation and cultivation, we have it all figured out. We have fence farming, mud wall farming and more as our innovative strategies. Also, with our innovative ideas on poultry farming, construction of fish ponds, the Eiffel tower model, farming on coconut tree barks, and more, we will add value to our project.

With this model, we are trying to address the issues pertaining to space constraints, short-term and long-term benefits, economic viabilities, and ensuring safe and non-toxic vegetables. For a healthy survival and disease free life, we propose this model of ours.
