Project Title: Protected cultivation of capsicum

Team Members: Kiran B., Diksha N., Smital P., Pratiksha D.,

Abstract: Capsicum is an incredibly important crop in today’s society. Heavily used in various restaurants like McDonald's, Domino's and KFC. Our project involves planting capsicum inside a “ Shednet”, spreading new, modern technology in agriculture to local farmers. Capsicum is in great demand in urban markets. Protected cultivation protects this high-value crop from rain, wind and other extremities like high temperature. Our project approach is to sustain agriculture and protect this crop by utilizing modern farming techniques.
